

Most insurance policies will cover Diopsys. However, plans can vary and it is the member's responsibility to be familiar with the benefits of the plan.

Some plans may:

- Not cover this test as part of your child's well care visit
- Apply a copay
- **Apply the charge to a deductible or coinsurance.**

In most cases, Oxford does not cover Diopsys and we recently found out that Aetna, CTCare, Emblem Health (will not cover anyone over the age of 3 years old) and GHI are not covering the exams as of October 1, 2011. If you have any of these insurance plans and would like Diopsys performed on your child, please call our office to discuss payment options.

Feel free to call your insurance company to discuss coverage of this test. The codes used by our billing department for Diopsys are below:

Diopsys/Visual Evoked Potential

Procedure (CPT) Code: 95930

Diagnosis Code: V20.2
